

**Hibben Undergraduate Fellowship Field Training Program:
UNM Archaeology Field School
White Rock, NM
June 6-July 29th, 2022**

Undergraduate and recently graduated students of Native American, Native Hawaiian, and Alaska Native descent are invited to apply for an Undergraduate Hibben Fellowship to cover the cost of attending University of New Mexico's 2022 Summer Archaeology Field School. The fellowship covers UNM tuition and course fees (6 credit hours, Anth 375), up to \$1000 in travel costs, and a stipend of \$3000.

This summer's field session will take place on the beautiful Pajarito Plateau in partnership with Los Alamos National Laboratory. Students will gain essential hands-on training in non-invasive archaeological field skills, including survey methods, site documentation, manual and digital mapping, and artifact analysis. Specifically, our work will focus on identifying and recording Coalition and Classic period (A.D. 1200-1550) Ancestral Pueblo sites on publicly accessible portions of LANL property. Fieldtrips to significant contemporaneous archaeological sites in the larger area and guest lectures will

provide students with a larger historic context for the cultural remains identified during fieldwork.

During the first four weeks of the class, students will conduct fieldwork near White Rock, NM, commuting to the field site from Albuquerque together each day in university vehicles. The following two weeks of the course will consist of lab work on the UNM campus working with archaeological collections from the area. The final two weeks will include the preparation of a final paper on the student's own time.

For more information about this program, please email Dr. Hannah Mattson at hmattson@unm.edu. Application materials can be found at [insert link] and are due on March 15, 2022.
