UNM Department of Anthropology Course Descriptions

anthropology.unm.edu

SPRING 2027

Anthropology is the study of humanity and its works, from the most remote point in human history to the cultural, linguistic, and biological diversity of the present. Each of the sub-fields of anthropology contributes to an integrated picture of past and present human variation. By comparing information gathered about different human groups, anthropology can understand much about why human society is as we find it today, and can offer insights into contemporary problems.

Archaeology

Archaeology is the scientific field of study concerned with the recovery of material remains of past and present human cultures, and description and explanation of past human lifeways and long-term cultural change. Archaeology investigates the relationships between human societies and their varied, changing environments over the last two million years. Archaeology seeks to systematically answer the fundamental questions about how our species has arrived at its present condition. Faculty field work and research is currently being conducted in the Southwest, Mesoamerica, Peru, Europe, and the eastern United States. In addition to area courses, the Department also offers courses in special topic questions and in various areas of archaeological method and theory. Two summer field schools in excavation or survey techniques are offered every year.

Updated October 2026

Evolutionary Anthropology

Evolutionary anthropologists employ a scientific approach to develop and test hypothesis about the nature, evolutionary causes, and scientific and social implications of human biological variation. Professionals in this discipline study human evolutionary ecology, primate behavior, human and non-human primate evolution, genetic anthropology, human biology, bioarchaeology, and forensic anthropology. Human evolutionary ecologists concentrate on understanding human behavior. They view human life histories as a series of adaptive tradeoffs between competing demands for growth, development, the finding of mates, reproduction, investment in offspring and the timing of other events throughout the life course. Faculty field work and research are currently conducted on: the health of ethnic groups and other minorities in the United States, especially in the Southwest and in South America; fertility and investment in children of men living in New Mexico; the historic demography of human groups in Portugal; the behavioral ecology of small scale forager and horticultural societies in South America and Africa; tropical conservation and local resource usage patterns; human status competition in stratified social systems; skeletal biology and human prehistory in the Americas; non-human primate social behavior and paleontology and biogeography in India and Africa; the physical and behavioral evolution of Neanderthals and other early humans; human genetic diversity in the Americas; the relationship between biology, language and culture; the practical and social implications of the global pattern of human morphological and genetic diversity.

Sociocultural and Linguistic Anthropology

The Sociocultural and Linguistic Anthropology (formerly Ethnology) program emphasizes comparative and historical perspectives on critical social issues, focusing on both the social and cultural aspects of class, gender, ethnicity, nationalism, and territorially. Power and difference as they are expressed in language, the politics of representation, the cultural construction of identity, expressive culture, political economy, immigration, and tourism are key areas of concern. Issues of social justice, human rights, and applied ethics inform faculty research and teaching in all these areas.

UNDERGRADUATE PROGRAM

The Anthropology Pre-Major

Students start as a pre-Anthropology major. They advance to the major after completing the following lower division and general requirements. The pre-anthropology requirements are the same for all concentrations and B.A./B.S. degrees. Moreover, the first four requirements also count towards fulfilling the College of Arts and Sciences general education requirements.

- English 1120 (Composition II)
- An additional Writing & Speaking Course from the general education menu.
- One Mathematics or Statistics Course from the general education menu.
- One Non-English Language Course from the general education menu.
- One Anthropology Course from the list below:
- ANTH 1115 (Introduction to Anthropology)
- ANTH 1155 (Introduction to Linguistic Anthropology)
- ANTH 1211 & 1211L (Archaeological Method and Theory and Lab)
- ANTH 1140 (Introduction to Cultural Anthropology)
- ANTH 1135 (Introduction to Biological Anthropology)
- ANTH 2175 (World Archaeology)
- A minimum of 26 credit hours completed

The Anthropology Major

After completing the pre-Anthropology curriculum, students become Anthropology majors. They choose a degree, B.A. or B.S., and a concentration in one of the four areas: Archaeology (B.A. or B.S.), Evolutionary Anthropology (B.A. or B.S.), Human Biology (B.S. only), Sociocultural and Linguistic Anthropology (B.A. only).

Use these flowcharts to plan your degree path:
Archaeology BA
Archaeology BS
Evolutionary Anthropology BA
Evolutionary Anthropology BS

Updated October 2026

Human Biology BS
Sociocultural and Linguistic Anthropology (SCALA) BA

General Requirements for B.A in Archaeology, Evolutionary Anthropology, and Sociocultural and Linguistic Anthropology:

- The core curriculum sequence in the student's concentration;
- The core curriculum sequence from a different one of the three concentrations: Archaeology, Evolutionary Anthropology, or Sociocultural and Linguistic Anthropology;
- One 200-, 300-, or 400-level course in the remaining concentration;
- At least 18 total credit hours of upper-division courses;
- 6-12 credit hours of upper-division courses in your selected concentration;
- Electives at any level in any concentration to make a total of 36 credit hours

General Requirements for the B.S. in Archaeology and Evolutionary Anthropology:

- The listed above for the B.A. options,:
- An advanced anthropology laboratory course or summer field-school of 3 credit hours minimum. This course is in addition to any other concentration lab requirements.
- At least 6 credit hours of mathematics as approved for the College of Arts and Sciences group requirements. The mathematics courses must be taken for a letter grade. The Evolutionary Anthropology and Human Biology B.S. degrees require college algebra, or a higher level.
- A minor in, or distributed among, Astrophysics, Biochemistry, Biology, Chemistry, Computer Science, Earth and Planetary Sciences, Geography, Mathematics, Physics, or Psychology.

NOTE: At the end of each course description a letter designation signifies the concentration specialization for which this class can be used.
(**A** = Archaeology; **E** = Ethnology/Socio-Cultural Anthropology; and, **EV** = Evolutionary Anthropology)

Spring 2027: Lower Division Undergraduate Courses

1115 Introduction to Anthropology

3 Credit Hours

Anthropology is the systematic study of the humanity both past and present. The course introduces students to the four subfields of anthropology, which include archaeology, biological, linguistic and cultural anthropology. Students will learn about the concepts and methods that anthropologists use to study our species and gain a broader perspective on the human experience.

1135 Introduction to Biological Anthropology

3 Credit Hours

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include the history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity. Biological Anthropology concentration students are required, and others are encouraged, to enroll concurrently in 1135L. **(E)**

1135L Introduction to Biological Anthropology Lab

3 Credit Hours

This laboratory course expands on the topics covered in lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology and behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process. Recommended, but not required, that this be taken concurrently with 1135. Two hours lab.

1140 Introduction to Cultural Anthropology

3 Credit Hours

This is an introductory course that provides an overview of cultural anthropology as a subfield within the broader discipline of anthropology and as a research approach within the social sciences more generally. The course presents core concepts and methods of cultural anthropology that are used to understand the ways in which human beings organize and experience their lives through distinctive cultural practices. More specifically, this course explores social and cultural differences and similarities around the world through a variety of topics such as: language and communication, economics, ways of making a living, marriage and family, kinship and descent, race, ethnicity, political organization, supernatural beliefs, sex and gender, and globalization. This course ultimately aims to present a broad range of perspectives and practices of various cultural groups from across the globe.

1155 Introduction to Linguistic Anthropology

3 Credit Hours

This is an introductory course which provides an overview of the discipline of Linguistic Anthropology. The course will discuss the implications of language within anthropology, as well as within the sciences and social sciences more generally. The course explores the core concepts and methods of linguistic anthropology, such as the basic nature of language, first and second language acquisition, bilingualism, and social and regional variations that are used to help students understand what it means to be human and the role of language in human societies.

Crossed listed as LING 2110.

1211 Archaeological Method and Theory (Archaeology in Practice)

3 Credit Hours

This class explores different ways of studying and interpreting the past through a survey of archaeology's historical, theoretical, and methodological development. If you are interested in archaeology as a career (or even just trying out an archaeological field school), this course is critical: it will provide you with the basic tools for conducting archaeological research and with an understanding of the background of the discipline. For this reason, this course is required for Anthropology majors with an Archaeology concentration. Even if you know you don't want to

be an archaeologist, though, this class may interest you. Have you ever wondered how archaeologists know what they know about the? Are you skeptical about some archaeological claims? Have you ever read a statement about the past and thought, “is this really true?” This class will provide you with the skills, both conceptual and practical, to answer those questions. **Corequisite: 1211L.**
